

# Timers' 'proper' UL certification opens US door for UK OEMs

Leading manufacturer of relays and timers Finder has reached a landmark position for the company in gaining the critical cULus certification from Underwriters Laboratories for its extensive 80 series timer range. This UL 'listing', as opposed to the more usual UL 'recognition', represents compliance to a far more arduous testing regime. Finder sees this listing mark for the United States and Canada as key to increasing sales of components into North America - both for itself and UK OEMs exporting machines and equipment into that area.

This latest accreditation reinforces Finders' commitment to obtaining the major national approvals for all of its products. As a result of this policy the company is able to boast a wider range of approval than most other manufacturers in its field. Currently, the following approvals apply to various products across Finders' range of relays and timers.

## Maritime applications

ABS	American Bureau of Shipping
Lloyds Register	UK marine
RINA	Italian naval

## Domestic applications

BEAB	UK
DEMKO	Denmark
FIMKO	Finland
NEMKO	Norway
